COLLEGE NAME:- G.P.JAUNPUR

Agenda

- Introduction of project
- Client Information
- Problems in existing system
- Proposed system
- Tools and Technology used
- Modules in project
- Conclusion

Introduction of project

e-Procurement or electronic procurement refers to the process of purchase and sale of goods or services through electronic methods, primarily the Internet.

Client Information

KARAM is India's leading Personal Protective Equipment Manufacturing enterprise, and is rated as one of the finest Indian companies providing world class PPE. KARAM ranks as the number one Company in the field of Personal Safety in the country, and as one of the top ten Fall Protection manufacturing companies in the World.

Problems in existing system

The existing system in the Company was based on physical registration of the vendors for the announced tender and the bidding was also very time consuming for the company.

Proposed System

In this software solution we provide a web based application for E- procurement of KARAM Industry. This web application provide full functionalities of E-procurement.

Tools and Technology

i.) J2EE (Servlets, JSP and JDBC)
ii.) Netbeans as IDE
iii.) MySql for back end database

Languages for programming:-
i.) Java
ii.) Java Script

Modules in Project

- Vendor Management
- Tender Management
- Enquiry Management
- Complain Management
- Discussion Forum
- Login Management
- Notification Management
- SMS API Integration
- Database Manager
